## Partner Training Program

### What Is It?

The **nettime** solutions Partner Training Program is designed to teach software trainers within our partner organizations everything they'll need to know to train their own clients about the set-up, administration and operation of the **stratustime** cloud-based time & attendance product. We also address common issues that clients have with time clock hardware as part of the training.

### About the Program

The **nettime** solutions Partner Training Program is an intensive, full-coverage, hands-on course that gives trainers access to a demo version of **stratustime** in order to create practice builds. During the program, we will create and explore both the basic (employee, manager, and administrative dashboards) and advanced features (database builds and configuration settings) of **stratustime**.

In addition to training on the software itself, scenarios with clients and internal trainees are roleplayed in order to give learners insight into common questions that **stratustime** administrators have.

The program also leaves ample time for questions applicable to each partner's particular training and implementation needs.

### Learning Objectives

At the completion of the course, software trainers will be able to train others to:

- Implement **stratustime** for a client on multiple devices
- Walk employees through employee self-service options
- Walk managers through manager features
- Set holidays, labor levels, schedules, overtime, and time off rules
- Establish security settings
- Import data into **stratustime**
- Configure **stratustime** with a client's payroll system
- Build **stratustime** databases

### Contact Us

For questions about the Partner Training Program, don't hesitate to contact your dedicated account manager, or call our **general partner sales number at 800-561-6366**.
