

The **stratustime**[®] Iris Time Clock

A Biometric Solution
Like You've Never Seen

stratustime[®]

Introducing **time & attendance automation** that supports your strategy, and protects your most valuable asset—your business.

Are you wasting time tracking employee hours with outdated, inefficient technology? If so, you could be compromising the long-term success of your business. Whether you're still manually recording hours or your current time-clock system isn't meeting expectations, there's a better way to improve payroll accuracy while saving time and money.

The **stratustime**[®] Iris Time Clock is the most accurate biometric clock available. It's simple to enroll and the ongoing punch process is a snap. Plus, it's fully integrated with an industry-leading time and attendance platform — **nettime** solutions **stratustime**.

The Next Evolution in Biometric

Biometric time clocks can help business owners prevent “buddy punching,” a worker fraud practice that could cost you time, money, and productivity. Unfortunately, many current biometric solutions can have accuracy limitations due to an intolerance for dirt, moisture, and employee mistakes. Facial recognition solutions may be better, but can be easily fooled or confused by similar looking employees.

The **stratustime** Iris Time Clock provides a simple, hands-free experience for 1 to 50,000 employees, with an iris reader that far surpasses the accuracy of other biometric alternatives, even in challenging work environments like healthcare facilities, restaurants, and construction sites.

Works in Practically Any Environment

The **stratustime** Iris Time Clock is suited for even the most challenging operational environments. It works in high humidity, and dirty or greasy fingers are not a problem. Individuals who have to suit up or scrub in won't need to touch an unsanitary device. Employees don't even need to take off their glasses to be recognized by the **stratustime** Iris Time Clock.

Get true visibility into labor data so you can spend less time tracking your employees' hours and more time making informed decisions about the future of your business.

Simplified Enrollment

The **stratustime** Iris Time Clock features a simplified enrollment process that is faster and easier than other solutions. It also enrolls both eyes for extra convenience and security.

Time and Attendance Integration

Full integration with **nettime** solutions **stratustime**, a revolutionary cloud-based time and attendance solution, it provides real-time data access in the cloud, automates your time-tracking, and helps control labor costs while simplifying your operations.

Unsurpassed Accuracy and Speed

Accurate time tracking helps ensure you know where your workforce is, so you can prevent rework and save valuable time. Our iris recognition technology is much more accurate than other biometric alternatives, with an extremely low expected error rate of only 1 in 1.2 million clock-ins.

The **stratustime** Iris Time Clock also features voice prompts and visual cues that can assist first-time users with positioning in front of the device. With authentication, the time involved is less than two seconds. Clocking in is incredibly fast — so your employees can start their shifts without delay.
