

Help End “Buddy Punching” with the **stratustime**[®] Facial Verification Service

stratustime[®]

Fast and Easy to Use

- Quickly Punch In using the convenience and familiarity of your own iOS or Android Tablet.
- Simple, one-touch menu lets you change the user interface to English and Spanish languages.
- Advanced FaceLocate™ technology quickly finds and identifies an employee's face for seamless authentication.

Accurate and Reliable

- Real-time Face Liveness Detection technology validates that a person – not a video or picture – is being used to gain access.
- Powerful algorithms flawlessly prevent buddy punching and ensure ID verification on every punch.

Smart and Secure

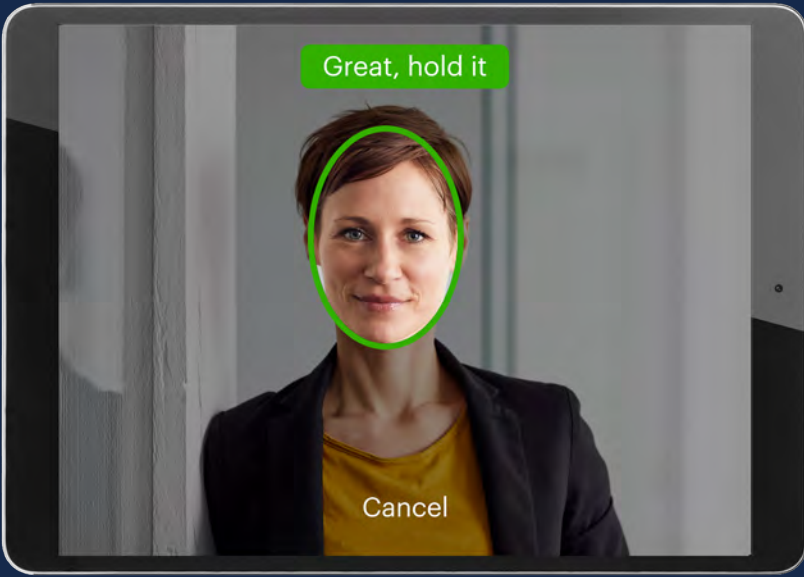

- Employees will enjoy hassle-free, fail-safe performance with each facial scan.*
- Face template generation and authentication occur locally on the Tablet and are “locked down” using the highest levels of encryption.

Mobile and Flexible

- An App-based Tablet design is more versatile than a traditional time clock – providing easier transport to job sites without power.
- Offline punching keeps track of employee hours even when an internet or a cellular connection is unavailable.

“Buddy punching” can add up fast – costing businesses thousands of dollars each year as a result of inaccurate time reporting. To help control labor costs and ensure accurate time tracking for your business, look to the Facial Verification feature available with the **stratustime Kiosk App** – a powerful identity verification solution that is fully integrated with **nettime** solutions **stratustime**.

**During facial scan enrollment, unique points are referenced on an employee's face and an algorithm converts these points into a mathematical template made up of 1s and 0s. It does not collect, store, or transmit an image of the employee's face nor can it be reverse-engineered into one.*

Powered by smart technology that ensures accuracy and security.

How it Works

1. Select Kiosk App on Tablet.
2. FaceLocate™ finds face and a secure digital template is created.
3. Upon Login, an algorithm finds a template match and access to the kiosk app is granted or denied.
4. After successful authentication, employee time is recorded and automatically uploaded into stratustime.
